

# Water Report

# 2024 Consumer Confidence Report

#### Spanish (Espanol)

Esta informe contiene informacion muy importante sobre la calidad de su agua potable. Por favor lea este informe o comuniquese con alguien que pueda tradiucir la informacion.

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water wells draw from the Lower Rio Grande Aquifer.

If you have any questions about this report or concerning your water utility, please contact Ernesto Carranza at 575-589-1075. We want our valued customers to be informed about their water utility.

Camino Real Regional Utility Authority routinely monitors for contaminants in your drinking water according to Federal and State laws. This table shows the results of our monitoring for the period of January 1 to December 31, 2024. As water travels drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791). The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity: microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses; organic Chemical Contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring, or manmade. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

How can I get Involved? Public meetings are held once a month. Please contact the water utilities office at (575)-589-1075 for more information of date and time.

#### **Regulated Contaminants**

The table below presents a summary of results of water testing done by the NMED Drinking Water Bureau and by the Utility Authority during the 2024 calendar year. Detected contaminants from 2016-2024 are also listed, if not sampled in 2024. The table contains the name of each contaminant, the highest level allowed by regulation (MCL), the ideal goals for public health (MCLG), the highest single amount found among all samples taken, the expected sources of such contamination, and the incidence of violations.

**Maximum Contaminant Level (MCL):** The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

**Maximum Contaminant Level Goal (MCLG):** The level of a contaminant in drinking water below, for which there is no known or expected risk to health, i.e. zero risk. The MCL usually accepts a risk of 1 in 1,000,000 or 1 in 100,000 persons.

**Action Level (AL):** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that the water supply system must follow.

	Important Drinking Water Definitions						
Term	Definition						
MCLG	MCLG: Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or appected risk to health. MCLGs allow for a margin of safety						
MCL	ICL: Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as ose to the MCLGs as feasible using the best available treatment technology.						
TT	TT: Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water.						
AL	AL: Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.						
Variances and Exemptions	Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions.						
MRDLG	MRDLG: Maximum residual disinfection level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.						
MRDL	MRDL: Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants						
MNR	MNR: Monitored Not Regulated						
MPL	MPL: State Assigned Maximum Permissible Level						

	Unit Description						
Term	Term Definition						
ug/L	ug/L: Number of micrograms of substance in one liter of water						
ppm	ppm: parts per million, or milligrams per liter (mg/L)						
ppb	ppb: parts per billion, or micrograms per liter (μg/L)						
pCi/L	pCi/L: picocuries per liter (a measure of radioactivity)						
mrems	mrems/yr = millirems per year (a measure of radioactive exposure over time						
NA	NA: Not applicable						
ND	ND: Not detected						
NR	NR: Monitoring not required, but recommended.						

TEST RESULTS							
Contaminant (Unit Measurement)	Violation Y/N	Range of Levels Detected	Highest Level Detected	Date Tested	MCLG	MCL	Likely Source of Contamination
Microbiological Contaminants:							
Total Coliform Bacteria	NO	Absent		2022	Absent	presence of coliform bacteria in 5% of monthly samples	Naturally present in the environment
Radioactive Contaminants:							
Beta/photon emitters (pCi/1)	NO	NA	12.5	2024	0	50	Decay of natural and man-made deposits
Combined radium 226/228 (pCi/1)	NO	NA	0.38	2024	0	5	Erosion of natural deposits
Gross alpha excluding radon and uranium	NO	NA	2.7	2024	0	15	Erosion of natural deposits
Uranium (ug/l)	NO	NA	18	2024	0	30	Erosion of natural deposits

Disinfection By-Products:							
Chlorine (ppm)	NO	.03 – 1.04	1.04	2024	4	4	Water additive used to control microbes
Total Trihalomethanes (ppb)	NO	NA	7.3	2024	NA	80	Disinfection byproduct
25. Total Haloacetic Acid (ppb)	NO	NA	2.4	2024	NA	60	Disinfection byproduct
Inorganic Contaminants:							
Arsenic (ppb)	YES	3 - 36	28	2024	0	10	Erosion of natural deposits; runoff from orchards; runoff from glass and electronics production wastes
Barium (ppm)	NO	.02906	.06	2023	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
Chromium (ppb)	NO	0 – 1	1	2023	1	100	Naturally occurs in the environment from the erosion of natural chromium deposits
Fluoride (ppm)	NO	1.21 – 1.55	1.55	2023	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
Mercury (ppm)	NO	ND - ND	0	2023	.002	.002	Erosion of natural deposits; discharge from refineries and factories; runoff from landfills and croplands
Nitrate (as Nitrogen) (ppm)	NO	0 – 0.47	0.47	2024	10	10	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
Selenium (ppb)	NO	ND - ND	0	2023	50	50	Discharge from petroleum and metal refineries; erosion of natural deposits; discharge from mines
Lead and Copper:							
Lead and Copper	Violation Y/N	Action Level (AL)	90 <sup>th</sup> Percentile	Date Sampled	MCLG	# Sites Over AL	Likely Source of Contamination
Copper- action level at consumer taps. (ppm)	NO	1.3	0.3	2024	1.3	0	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
	1		1	1		i e	1 0 1 1 1 1 1 1 1

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Camino Real Regional Utility Authority is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water testing. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the **Safe Drinking Water Hotline** or at <a href="http://www.epa.gov/safewater/lead">http://www.epa.gov/safewater/lead</a>. We were required by the EPA to provide a lead line inventory to NMED. For a copy of the inventory, please contact Camino Real Regional Utility Authority.

2024

#### **Arsenic:**

Lead - action level at

consumer taps. (ppb)

NO

15

Some people who drink water containing arsenic in excess of the MCL over many years could experience skin damage or problems with their circulatory system and may have an increased risk of getting cancer.

3

Violation Type	Violation Begins	Violation Ends	Violation Explanation		
MCL, Average	1/01/2024	03/31/2024	We received a violation on 1/17/2024 for exceeding the Arsenic MCL Running Annual		
			Average at Santa Teresa Industrial Park and Border Tank Area.		
MCL, Average	04/01/2024	6/30/2024	We received a violation on 4/19/2024 for exceeding the Arsenic MCL Running Annual		
			Average at Santa Teresa Industrial Park.		
MCL, Average	07/01/2024	9/30/2024	We received a violation on 9/19/2024 for exceeding the Arsenic MCL Running Annual		
			Average at Santa Teresa Industrial Park and Sunland Park Treatment Plants.		
MCL, Average	10/01/2024	12/31/2024	We received a violation on 11/18/2024 for exceeding the Arsenic MCL Running		
			Annual Average at Santa Teresa Industrial Park Treatment Plant.		

• CRRUA Management, along with its consultant, began addressing the arsenic issues in December 2023. The arsenic samples collected by NMED on April 3, 2024, July 30, 2024 and October 22, 2024 were all below the MCL but we remained in violation because the Running Annual Average was not below the MCL.

Corrosion of household plumbing

system; Erosion of natural deposit

#### **Ground Water Rule Violations:**

The Ground Water Rule specifies the appropriate use of disinfection while addressing other components of ground water systems to ensure public health protection

Some Violation	Violation	Violation Ends	Violation Explanation
Type	Begins	Violation Ends	Violation Explanation
Failure Address Deficiency (GWR)	01/17/2024	08/26/2024	We failed to correct significant deficiencies associated to the 2023 sanitary survey inspection before the required due date. We have since corrected the deficiency.
Failure Address Deficiency (GWR)	02/02/2024	02/02/2024	We failed to correct significant deficiencies associated to the 2023 sanitary survey inspection before the required due date. We have since corrected the deficiency.
Failure Address Deficiency (GWR)	03/07/2024	08/28/2024	We failed to correct significant deficiencies associated to the 2023 sanitary survey inspection before the required due date. We have since corrected the deficiency.
Failure Address Deficiency (GWR)	04/10/2024	Not Corrected	We failed to correct significant deficiencies associated to the 2023 sanitary survey inspection before the required due date. Airport Tank (020) water level indicator is inoperable and the treatment plants lack alarms for automatic shutdown. We plan to correct the exterior Airport Tank target gauge indicator and upgrade the treatment plant alarms in the upcoming months of the new fiscal year as funding becomes available.
Failure Address Deficiency (GWR)	11/22/2024	Not Corrected	We failed to correct significant deficiencies associated to the 2023 sanitary survey inspection before the required due date. Inadequate splash pad at Tierra Madre Tank has led to major soil erosion. We plan to implement necessary mitigation efforts to address the dirt erosion deficiency at the Tierra Madre Tank in the new fiscal year as funding becomes available.

# **Lead and Copper Rule:**

The Lead and Copper Rule protects public health by minimizing lead and copper levels in drinking water, primarily by reducing water corrosivity. Leand and copper enter drinking water mainly due to corrosion of lead and copper containing plumbing materials.

Some Violation	Violation Begins	Violation Ends	Violation Explanation
Type			
Public Notice Rule Linked to Violation	3/3/2025	Not Corrected	We failed to collect all required lead & copper samples in 2024. We were required to collect 60 lead & copper samples every 6 months. We will return to compliance when we collect 60 lead & copper samples before July 1, 2025.

## **Public Notice Rule:**

The Public Notice Rule helps to ensure that consumers will always know if there is a problem with their drinking water. These notices immediately alert consumers if there is a serious problem with their drinking water (e.g., a boil water emergency)

Some Violation	Violation Begins	Violation Ends	Violation Explanation
Type			
Public Notice Rule Linked to Violation	6/16/2024	09/30/2024	We received a violation for failing to provide public notice and return the public notice certification form to NMED by the required due date. Public notice was for an Asbestos Monitor & Reporting NOV. We provided public notice to customers in the 2023 CCR and have since returned to compliance regarding this NOV.

### Source Water Assessment and Assessment and Protection Program (SWAPP)

The Camino Real Regional Utility Authority is well maintained and operated, and sources of drinking water are generally protected from potential sources of contamination based on well construction, hydro geologic settings, and system operations and management. The susceptibility rank of the entire water system is moderately HIGH please contact the Camino Real Regional Utility Authority to discuss the findings of the SWAPP report.

Thank you for allowing us to continue providing your family with clean, quality water this year. In order to maintain a safe and dependable water supply we sometimes need to make improvements that will benefit all of our customers. These improvements are sometimes reflected as rate structure adjustments. Thank you for understanding.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders,

some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

We at **Camino Real Regional Utility Authority** work around the clock to provide top quality water to every tap. We ask that all our customers help us conserve and protect our water sources, which are the heart of our community, our way of life and our children's future.
